Velospin 2000

Don't be fooled by its compact design and understated presence, this machine can stand up to balancers literally twice the price

With 2D data input (automatic input of distance and diameter measurements), reassuringly quiet operation and super-fast spin cycle, the 2000 can perform in any environment, regardless of volume or application.

With an extensive range of weight-position choices, the ability to hide the weights behind the spokes on aesthetically-sensitive rims, and the choice of 12 o'clock or 6 o'clock weight placement, this model also provides an impressive set of balancing choices.

Laser-guidance directs the operator to the precise location for weight-application, and the convenient foot-lock holds the shaft in place during the process.

Technical Specification

Single-phase power supply: 230v 50/60Hz

Accuracy: +/- 0.5g

Rim width capacity: 1.5" - 20"

Rim Diameter capacity: 10" - 30"

Max wheel weight: 75 kg

Certificate No:445672024
