

DAMA HDM450

This versatile 4.5-tonne 4-post lift functions as both a service lift and a wheel alignment lift. It features built-in rear slip plates, recessed areas for front turnplates, and an automatic pneumatic locking system — offering full wheel alignment capability at an exceptional price.

Thanks to lockable rear slip plates and supplied covers for the turnplate recesses, the lift can be quickly converted into a flat platform service lift, making it ideal for a wide range of vehicles and workshop tasks.

With a generous 5,220mm platform length and 2,860mm width between the posts, it easily accommodates larger vehicles, including long wheelbase vans, 4x4s, and motorhomes. It boasts a 4.5-tonne lifting capacity and a 60-second lift time.

- Service and wheel alignment
- Rear lockable slip plates
- Turnplate recesses with covers
- 1 hydraulic cylinder and 2 steel cables
- Synchronisation using steel cable
- Solenoid valve for lowering
- Release of pneumatic / manual safety lock
